DATA SOURCE & NOTES

- Revenue comes from sealed DSRs: fuel at pump price from nozzle readings, Product Sales net of GST (GST is a pass-through set off in GSTR-3B).
- Cost of sales = quantity sold × the cost price frozen at day close (margin method), not opening + purchases − closing stock. Fuel cost is the dealer price incl. VAT, so VAT sits in both revenue and cost and the fuel margin is unaffected. Tank variance is not in this P&L.
- Other income and expenses are Office Records by Entry Date. The previous-period column is built the same way from its own DSRs and records.
- Direct / Indirect expense sections (marked *). (needs: Direct / Indirect flag on expense heads, group B)
